# Midpoint Checkin

Nabih Estefan, Andrew Mascillaro

## How are you feeling about the current state of the project?

The current state of the project is pretty good! We have progress on a chess evaluation function and are pretty close to an MVP for the project.

## What have you accomplished up until this point?

We've been able to create a few things:

- A basic chess engine that plays random moves
- An evaluation function that returns a number based on the current position
- A simulator where our engine plays a real chess engine

## What are your immediate next steps?

- Get evaluation to accept castling and en passant (edge cases)
- Use a BFS or other tree traversal with the evaluation function

## Have you rescaled the project since submitting the proposal? If so, what changes have been made?

We haven't rescaled the project. It's going well.

## (If applicable) How is the teaming situation going?

Teaming is memeing. Acutally though, we're doing very well as a team. We're both interested in the project and collaborate well.

## Is there any way the DSA teaching team can support you?

Physically impossible

## Is there anything else you would like the teaching team to know?

No!!!
